PROFESSIONAL EXPERIENCE

Fullstack Engineering Specialist, *xAI* Jan 2026 – Sep 2026 | Remote

- Create high-quality coding data to support AI model training, leveraging full-stack engineering expertise and practical software development experience.
- Challenge LLMs with complex programming tasks and edge cases to test their problem-solving capabilities, code correctness, and adherence to technical requirements.
- Develop and solve programming problems that require analytical reasoning, robust implementations, and consideration of edge cases.
- Apply software engineering judgment to assess technical solutions and identify potential gaps in correctness, implementation quality, and reasoning.

Java Fullstack Developer, *Citi* Jun 2025 | Pune, India

• Leading migration of enterprise batch workloads from a licensed **AIS Modeler** tool to **Spring Batch**, designing a modular batch framework and supporting services (scheduling, retries, monitoring), reducing vendor dependency and driving long-term cost savings.
• Designed and implemented a **fault-tolerant email notification system** with retries and batch reprocessing, reducing notification failures by **80%** and enabling reliable workflow-based user communication.
• Built **Excel export functionality with localization support**, enabling global users to download region-specific data and improving cross-region usability.
• Developed and maintained **unit tests for a large legacy Java codebase**, creating test strategies for tightly coupled classes under non-refactoring constraints, enabling safer feature delivery.

Software Engineer (Full Stack), *Siemens Industry Software* Jul 2021 – Jun 2025 | Pune, India

- Initiated **AI-driven automation** for service plan creation, improving user efficiency and reducing manual effort.
- Built a **React-based 3D file viewer** with scalable architecture, reducing infrastructure costs by **50%** and load times by **40%**.
- Developed a **Spring Boot microservice** for PLMX file generation, enabling scalable and resilient offline 3D visualization.
- Optimized 3D animation pipelines, reducing load times from minutes to seconds through efficient REST APIs and data handling.
- Created reusable **3D web components** for seamless integration across multiple applications.
- Engineered a **Node.js/Express cache file server** supporting large file uploads/downloads and metadata management.
- Achieved **93% unit test coverage** with Jest, reducing production issues by **60%**.
- Improved deployment reliability by **Dockerizing services** and implementing CI/CD pipelines on Linux, reducing deployment time by **70%**.

Fullstack Developer (Intern), *Inkoop* Jan 2021 – Jun 2021 | Banglore, India

- Developed Draxlr's **Vue.js** UI for responsive, intuitive data visualization.
- Built query snapshot functionality with auto-updates via BullMQ cron jobs in a microservices-based architecture.
- Integrated Stripe payments and raw query support for **PostgreSQL** and **MongoDB** databases.
- Designed and maintained backend REST APIs with Node.js and Express, ensuring scalability and reliability.

TECHNICAL SKILLS

— **AI Training:** Coding-Data Creation, Programming Problem Solving, Technical Reasoning, — **Programming Languages:** Java, JavaScript, TypeScript, Python, — **Databases:** MySQL, MongoDB, Firebase, PostgreSQL, — **Frameworks:** SpringBoot, React, Express, NestJs

EDUCATION

Pune University, *Computer Engineering* Aug 2017 – Jun 2021 | Pune, India

Relevant Courses: Engineering Mathematics I-III, Data Structures and Algorithms, Object Oriented Programming, Advanced Data Structures, Database Management Systems, System Design
